### **Abstract:**

Summarize motivation and main results.

Introduction:

Sample equations,

$$\vec{\nabla} \cdot \vec{E} = \frac{\rho}{\varepsilon_0} \tag{1}$$

$$\vec{\nabla} \cdot \vec{B} = 0 \tag{2}$$

$$\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t} \tag{3}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \left( \vec{J} + \varepsilon_0 \frac{\partial \vec{E}}{\partial t} \right) \tag{4}$$

Within report reference as [Equation n].

Investigation 1:

Sample derived equation,

$$z = f(x_1, x_2, ..., x_n) \qquad \Rightarrow \qquad \delta z = \sqrt{\sum_{i=1}^n \left( \frac{\partial f(x_1, x_2, ..., x_n)}{\partial x_i} \delta x_i \right)^2}$$

Sample table,

$$\vec{F}_E = \frac{1}{4\pi\varepsilon_0} \frac{qQ}{r^2} \hat{r}$$
$$\uparrow$$
$$\vec{F}_E = -\vec{\nabla} \Delta U$$
$$\uparrow$$
$$\Delta U = \frac{1}{4\pi\varepsilon_0} \frac{Qq}{r}$$

$$\rightarrow$$

$$\vec{E} = \frac{1}{q} \vec{F}$$
$$\rightarrow$$

$$\vec{E} = \frac{1}{4\pi\varepsilon_0} \frac{Q}{r^2} \hat{r}$$
$$\downarrow$$
$$\Delta V = - \int_C \vec{E} \cdot d\vec{l}$$
$$\downarrow$$
$$\Delta V = \frac{1}{4\pi\varepsilon_0} \frac{Q}{r}$$

$$\leftarrow$$

$$\Delta U = q \Delta V$$
$$\leftarrow$$

$$\Delta V = \frac{1}{4\pi\varepsilon_0} \frac{Q}{r}$$

Figure 1: Random Table

Sample figure,

Figure 2: Random Figure

Sample code,

---

```
def fibonacci(n):  
    if n <= 1:  
        return n  
    else:  
        return(fibonacci(n-1) + fibonacci(n-2))
```

---

Figure 3: Random Code

## Conclusion:

## Questions:

1. Question 1
